PROFESSIONAL SUMMARY

Full-Stack Software Developer and Electronics and Communication Engineering graduate with hands-on experience developing web applications, backend services, database-driven platforms, and production-deployed software. Proficient in JavaScript, React, Next.js, Node.js, Express.js, PostgreSQL, MongoDB, and modern web technologies, with practical experience in Docker, Linux, Nginx, Git, and deployment workflows. Experienced in building business management systems, e-commerce platforms, authentication workflows, payment management features, and real-time applications. Additional interests include cloud infrastructure, IoT, artificial intelligence, and resilient distributed systems. Focused on delivering secure, maintainable, and scalable software solutions.

TECHNICAL SKILLS

Programming: JavaScript (ES6+), TypeScript, SQL, Python, Embedded C/C++

Frontend: React.js, Next.js, Vite, Tailwind CSS v4, HTML5, CSS3, responsive web development

Backend: Node.js, Express.js, NestJS, REST APIs, JWT authentication, OAuth, Google Sign-In, email OTP verification, role-based access control

Databases: PostgreSQL, MongoDB, Prisma ORM, Supabase, relational database design

DevOps & Infrastructure: Docker, Linux CLI, Nginx, Git, GitHub, CI/CD fundamentals, server configuration, cloud deployment, database backup practices

Real-Time & Integration: Socket.IO, event-driven architecture, queue-based processing, API integration

CMS & E-Commerce: WordPress, Astra Theme, Elementor, e-commerce workflows

PROFESSIONAL EXPERIENCE

Full-Stack Software Developer — Tamrat Digital Equb

Client Project | Production Application

Website: https://tamedigitalequb.com/

- Develop and maintain a digital Equb management platform supporting member administration, group management, payment tracking, and lottery-based winner selection.

- Implement administrative and member-facing workflows for payment verification, account management, and transaction status tracking.
- Develop backend functionality and database operations to support business rules and reliable data management.
- Contribute to production deployment, server configuration, and ongoing application improvements.
- Work on reporting, notifications, and administrative controls to improve operational efficiency.

Technologies: Next.js, Node.js, PostgreSQL, Prisma, Docker, Nginx, GitHub

KEY SOFTWARE PROJECTS

2. Merkato Store — Full-Stack E-Commerce Platform

Role: Full-Stack Developer

- Designed an e-commerce platform to support online product discovery, ordering, and retail management.
- Developed frontend and backend components using the MERN stack.
- Planned and implemented order lifecycle management, including order status updates and customer notifications.
- Explored AI-assisted product discovery and natural-language search capabilities.
- Applied containerization practices to support consistent development and deployment environments.

Technologies: MongoDB, Express.js, React.js, Node.js, Docker

3. Hotel Management, Food Ordering & Inventory System

Role: Full-Stack & Database Developer

- Developed a hotel and restaurant management solution using a PostgreSQL-based application architecture.
- Designed QR-code ordering workflows that allow customers to browse menus, submit orders, and follow order progress.
- Designed relational database structures for menu management, room bookings, orders, and inventory.
- Developed workflows for kitchen order processing, ingredient tracking, stock deductions, and inventory records.
- Designed administrative dashboards for monitoring orders and business operations.

Technologies: PostgreSQL, Express.js, React.js, Node.js, REST APIs

4. Hybrid-Cloud Edge Synchronization Engine

Role: Software Architecture & Backend Project

- Designed a system concept for maintaining application availability when internet connectivity is interrupted.
- Explored local data storage and synchronization between edge environments and a central cloud database.

- Investigated conflict detection, idempotent operations, event replay, and queue-based processing.
- Focused on data consistency and recovery after network connectivity is restored.

Technologies: Node.js, NestJS, PostgreSQL, distributed systems concepts

5. AI-Powered Ethiopian Job Marketplace

Role: Full-Stack Developer

- Designed a recruitment platform connecting Ethiopian job seekers, employers, and recruiters.
- Developed application workflows for job postings, candidate profiles, CV management, and job applications.
- Planned candidate and job matching based on skills, education, experience, and job requirements.
- Designed dashboards for job seekers, recruiters, and administrators.

Technologies: React.js, Node.js, Express.js, PostgreSQL, AI integration concepts

7. Video Watch & Earn Platform

Role: Full-Stack Developer | In Development

- Designed a platform concept in which administrators publish video tasks and users earn platform rewards for eligible activity.
- Planned user accounts, task tracking, referrals, withdrawal requests, and payment administration.
- Designed separate user and administrator dashboards.
- Explored YouTube Player/API integration and activity verification.

Technologies: JavaScript, React.js, Node.js, REST APIs, YouTube API

EDUCATION

Bachelor Degree of Science in Electronics and Communication Engineering

Adama Science and Technology University (ASTU)
2021–2025 | Ethiopia

CERTIFICATIONS

- **Full Stack Web Development and Enterprise Application** — Qiyas Web Development @ World Bank
- **AI Model Development and Implementation**— Youth Empowerment and Economic Accelerator Platform (YEEAP), in partnership with **Florida University Southeast**
- Certificate Course in Web Development — Udemy / Aakaro Consulting
- WordPress Web Development: Zero to Hero — Udemy
